SUMMARY

Mobile Developer specialized in Android and Kotlin Multiplatform, experienced in fintech and AI-driven apps. Strong background in MVVM, Clean Architecture, API integration, UI testing and real-time systems.

EXPERIENCE

Android Mobile Developer

Bankuish **October 2024 - Present, Remote, EE.UU.**

- Developed and maintained native Android features using Kotlin and MVVM architecture, contributing to 10+ production features across multiple app modules.
- Implemented a modular architecture following Clean Architecture principles, improving code maintainability and reducing feature development time by ~20%.
- Integrated REST APIs and handled asynchronous data flows using Coroutines and Flow, supporting real-time data updates and multiple backend services.
- Works with dependency injection using Koin and Hilt to manage 15+ app components and shared services across modules.
- Participated in code reviews, bug fixing and performance optimization, reducing crash rates and UI-related issues by ~25%.
- Improved UI consistency and stability using Jetpack Compose components, impacting 20+ screens and reducing UI regressions in production releases.

Mobile Developer (Kotlin Multiplatform)

Filance.ai (by Bankuish) **October 2024 - Present, Remote - USA**

- Built cross-platform features using Kotlin Multiplatform, sharing business logic between Android and iOS across 2 platforms and multiple production modules.
- Designed and maintained a scalable MVVM + Clean Architecture codebase across platforms.
- Implemented UI integration tests using Jetpack Compose, increasing test coverage and improving release stability across critical user flows.
- Integrated APIs using Ktor and handled networking, serialization and error management for multiple backend services and environments.
- Ensured code consistency and cross-platform compatibility across multiple environments (dev, staging, production), supporting reliable multi-region deployments.

Mobile Developer

Twinfluence **July 2025 - January 2026, Remote - USA**

- Developed the first MVP of a real-time AI-powered mobile application, delivering a production-ready prototype in under 3 months.
- Implemented video playback and streaming using ExoPlayer, handling buffering and low-latency playback for real-time interactions.
- Integrated networking with OkHttp, managing streaming responses and API communication across multiple endpoints.
- Optimized media delivery and buffering strategies, reducing playback interruptions and latency by ~30%.
- Researched, evaluated and tested 3+ open-source AI tools to support real-time avatar and digital clone interactions.
- Collaborated in defining technical feasibility and selecting the AI stack for the first stable product version.

Mobile Developer

Witch Cave **August 2022 - April 2024**

- Led the end-to-end development of the Valka Android app as the sole Android developer, owning the full lifecycle from architecture to production release.
- Built the entire UI layer and user experience across 5+ app screens without external design resources.
- Integrated REST APIs and asynchronous flows using Coroutines and LiveData.
- Implemented app navigation, state management and local persistence for core user flows.
- Managed bug fixing, refactoring and performance optimization across production releases.
- Handled version control, releases and technical decisions independently.

EDUCATION

Information Systems Engineering (In Progress)

Universidad Tecnológica Nacional FacultadRegional San Rafael · San Rafael, Argentina · 2023

Associate degree in Programming

Universidad Tecnológica Nacional FacultadRegional San Rafael · San Rafael, Argentina · 2023

PROJECT

BugAmazon — Android Developer (Personal Project)

Schoolar Project (UTN) • github.com/chimydevs/EcommerceApp • August 2022 - March 2023

- Developed a full e-commerce Android application using Kotlin and MVVM architecture.
- Implemented user authentication and real-time data storage using Firebase.
- Applied SOLID principles to improve code maintainability and scalability.
- Integrated asynchronous operations using Coroutines, Flow and LiveData.
- Built UI components using View Binding and modern Android patterns.
- Implemented image loading and caching using Glide.
